Figma - Class Activity – 03.10.2026

Figma step-by-step from the basics - how to create a complete UI design

1. Create a Figma account

Go to Figma

Sign up or log in.

Select Design → New design file.

2. Understand the Figma interface

Area Purpose

Toolbar Select, frame, shapes, pen, text, etc.

Layers

panel

Shows all objects in your design

Canvas Main area where you design

Design

panel

Size, position, colors, borders, effects

Prototype Connect screens and create

interactions

Assets Components and reusable elements

3. Create your first Frame

Press F

Select Phone from the right panel.

Choose something like iPhone 14/15.

Rename the frame: Login Screen.

4. Add a background

Select the frame.

In the right panel, find Fill.

Choose a color or enter a HEX value such as #F5F7FA.

5. Add text

Press T.

Click inside the frame.

Type:

Welcome Back

Then adjust:

Font

Font size

Weight

Alignment

Color

6. Create a button

Press R to create a rectangle.

Give it a suitable size, e.g. 320×50 .

Set corner radius to 8–12.

Add a fill color.

Press T and place:

Login

over the rectangle.

Select both and use Align horizontal and vertical centers.

7. Add input fields

Create a rounded rectangle:

| _____ |
| Email Address |

Duplicate it with Ctrl + D and change the label to:

Password

8. Add an icon

You can use:

Figma Community resources

Icon libraries/plugins

SVG icons

For example:

Welcome Back

| Email Address |

Login page:

1. Online Food Delivery App – Mobile UI Design

Scenario:

A food delivery company wants a mobile application through which customers can browse restaurants, search for food, add items to a cart, and place orders.

Question:

Using **Figma**, design a mobile food delivery application with the following screens: 1.

Login Screen – Email, password, Login button, and Forgot Password option. 2.

Home Screen – Search bar, food categories, restaurant cards, and navigation bar.

3. **Restaurant Menu Screen** – Restaurant name, food items, prices, images, and Add button.

4. **Cart Screen** – Selected items, quantity, total amount, and Checkout button.

5. **Order Confirmation Screen** – Order number, total amount, delivery status, and estimated delivery time.

Figma requirements: Use **Frames**, **Auto Layout**, **Components**, icons, and **Prototype** interactions to connect the screens.

Figma Design:

2. College Student Attendance App – UI/UX Design

Scenario:

A college wants a mobile application that allows students to view their attendance percentage and attendance details for different subjects.

Question:

Using **Figma**, design a student attendance application containing:

1. **Login Screen** – Student ID, password, and Login button.
2. **Dashboard** – Student name, register number, overall attendance percentage, and subject summary.
3. **Subject Details Screen** – Subject name, classes conducted, classes attended, and attendance percentage.
4. **Attendance Calendar** – Display present, absent, and leave status for different dates.
5. **Profile Screen** – Student photo, name, department, year, and register number.

Figma requirements: Create reusable **components** for buttons and navigation elements, use **Auto Layout**, and create a **clickable prototype** connecting all screens.

Figma Design:

3. E-Commerce Clothing App – Product Purchase Interface Scenario:

An online clothing store wants a mobile application where customers can browse products, view product details, select sizes, and add products to their shopping cart.

Question:

Using **Figma**, design the following screens for the clothing shopping application: 1. **Home**

Screen – Search bar, categories, promotional banner, and featured products. 2.

Product Listing Screen – Product image, name, price, rating, and filter option.

3. **Product Details Screen** – Large product image, product name, price, description, size

selection, and Add to Cart button.

4. **Shopping Cart Screen** – Selected products, quantity controls, price, and total amount.

5. **Checkout Screen** – Delivery address, payment method, total amount, and Place Order button.

Figma requirements: Use **Components**, **Variants**, **Auto Layout**, **icons**, and **Prototype navigation**. The size-selection buttons should demonstrate different component states.

Figma Design:

4. Hospital Appointment Booking System – Healthcare UI

Scenario:

A hospital wants a mobile application that allows patients to search for doctors and book appointments online.

Question:

Using **Figma**, design a hospital appointment booking application with: 1.

Welcome/Login Screen – Hospital logo, patient login fields, and Login button. 2.

Doctor Search Screen – Search bar, medical specialties, doctor cards, and filters.

3. **Doctor Profile Screen** – Doctor photograph, name, specialization, experience, consultation fee, and available time slots.

4. **Appointment Booking Screen** – Selected doctor, date selection, available time slots, and Book Appointment button.

5. **Confirmation Screen** – Patient name, doctor name, appointment date, time, and

appointment ID.

Figma requirements: Use **Auto Layout**, **Components**, **consistent typography**, **icons**, and **Prototype interactions**. The prototype should allow a user to navigate from doctor selection to appointment confirmation.

Figma Design:

5. College Event Registration Website – Responsive UI Design

Scenario:

A college is organizing a technical symposium and needs a website where students can view event information and register for events.

Question:

Using **Figma**, design a responsive website for the technical symposium containing:

1. **Home Page** – Event logo, navigation menu, event title, date, venue, and Register Now button.
2. **Events Page** – List of technical events with event name, description, date, and Register button.
3. **Event Details Page** – Event description, rules, eligibility, schedule, and registration option.
4. **Registration Page** – Student name, email, department, year, selected event, and Submit button.
5. **Registration Confirmation Page** – Registration ID, selected event, date, and confirmation message.

Figma requirements: Create both **desktop** and **mobile** layouts using **responsive Auto**

Layout, Components, grids, and Prototype interactions. *Demonstrate navigation from the Home Page → Events → Event Details → Registration → Confirmation.*
